■ PRECAUTIONS FOR USING

This circuit does not integrate protection circuits such as over-current and overvoltage protectors. Thus, the IC may be damaged if excess current or voltage is occurred to the IC. Make sure the IC design is fine so that excess current or voltage will not be applied to the IC. You must take extreme care to the design of the output line, V_{CC} and GND line because IC may be destroyed under the condition of short-circuit between outputs, air contamination fault, or fault by improper grounding.
