CMOS IC

CHARGE PUMP DC-DC VOLTAGE CONVERTER

DESCRIPTION

ME7660 is a charge pump DC-DC voltage converter using AL-gate CMOS technology and optimization design. It converts a +1.5V to +10V input to a corresponding -1.5V to -10V output using only two external capacitors, eliminating inductors and their associated cost, size and EMI. The on-board oscillator operates at a nominal frequency of 10KHZ. Operation below 10 KHZ (for lower supply current applications) is possible by connecting an external capacitor from OSC to ground.

FEATURES

- * Converts +5V Logic supply to +5V
- * Wide input voltage range:1.5V~10V
- * Efficient voltage conversion:99.9%
- * Good power efficiency:98%
- * Low power supply:50uA@5Vin
- * Only two external capacitors required
- * Compatible with RS232 negative power supply standard
- * No Dx diode needed for high voltage operation

■ TESTING CIRCUIT

■ TYPICAL APPLICATION CIRCUIT

Above figure is the basic application circuit to provide a negative supply from -1.5V ~ -10V while a positive supply from +1.5V ~ +10V is available. When $V^+=+5V$, the output resistance is about 100Ω; The output voltage is -4V while the load current is 10mA.
