

## UD05104

Preliminary

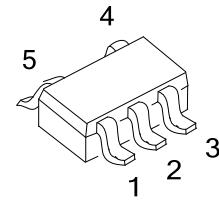

LINEAR INTEGRATED CIRCUIT

**5V 1A 2.25MHz  
SYNCHRONOUS STEP-DOWN  
DC/DC CONVERTER**

■ DESCRIPTION

The UTC **UD05104** is a 1A high frequency synchronous Step Down DC/DC converter using constant frequency, current mode architecture. The device integrates main switch and synchronous rectifier switch for high efficiency without an external schottky diode. To maximize light load efficiency, The UTC **UD05104** draws only 30 $\mu$ A quiescent current to improve light load efficiency. In shutdown, The UTC **UD05104** reduces supply current less than 1 $\mu$ A. The UTC **UD05104** can supply 1A of load current from 2.5V to 6.0V input voltage. The output voltage can be regulated as low as 0.6V. The switching frequency is internally set at 2.25MHz, as for operation mode: UTC **UD05104** is automatic PSM/PWM mode.

The UTC **UD05104** has built-in internal Soft Start, Short Circuit Protection and OTP functions, allowing the use of small surface mount inductors and capacitor.

**■ APPLICATION INFORMATION (Cont.)****Output Voltage**

The output voltage is set using the FB pin and a resistor divider connected to the output as shown in AP Circuit below. The output voltage ( $V_{OUT}$ ) can be calculated according to the voltage of the FB pin ( $V_{FB}$ ) and ratio of the feedback resistors by the following equation, where ( $V_{FB}$ ) is 0.6V:

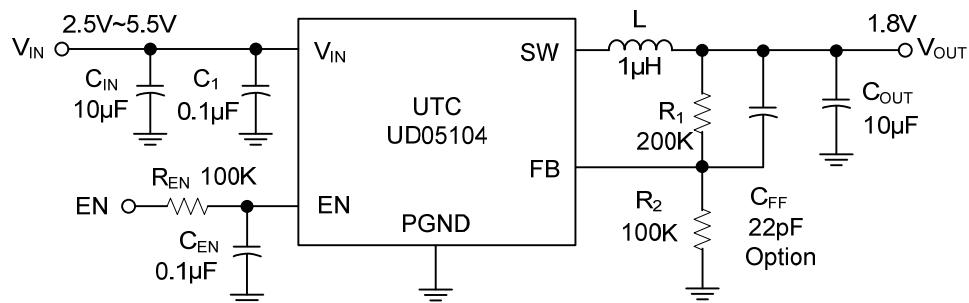

$$V_{FB} = V_{OUT} \times \frac{R_2}{(R_1 + R_2)}$$

Thus the output voltage is:

$$V_{OUT} = 0.6 \times \frac{(R_1 + R_2)}{R_2}$$

Choose  $R1=100k\Omega \sim 200k\Omega$  to ensure feedback loop noise immunity. It is optional to add a feed-forward capacitor  $C_{FF}=22\sim33pF$  in parallel with  $R1$  to achieve better transient response performance.
