CMOS IC

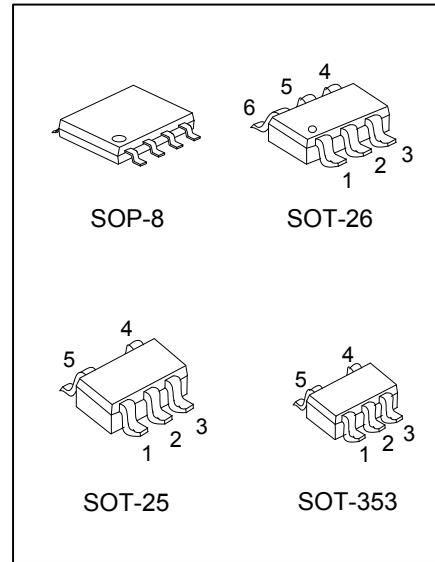

# FAMILY OF LOW-POWER RAIL-TO-RAIL INPUT/OUTPUT OPERATIONAL AMPLIFIERS WITH SHUTDOWN

## ■ DESCRIPTION

The UTC **LV2460/2461** is a low-power rail-to-rail input/output op amplifier with low supply current (500 $\mu$ A) and low voltage (2.7-6V), that can be designed into a wide range of applications. The UTC **LV2460** offers a shutdown terminal, which places the amplifier in an ultralow supply current mode ( $I_{CC} = 0.3\mu$ A).

The UTC **LV2460/2461** have a guaranteed 1.6 V/ $\mu$ s slew rate and low supply current. rail-to-rail output and high output current make the IC's ideal for buffering analog-to-digital converters. And the input common-mode voltage range includes ground and  $V_{CC}$ . Besides, they are also able to drive large capacitive loads.

Good AC performance can be provided because of 6.4MHz of bandwidth and 1.6 V/ $\mu$ s of slew rate. Furthermore, low input noise voltage and low input offset voltage make good DC performance.
